EDUCATION

University of Waterloo

September 2024 – April 2026

Master of Data Science and Artificial Intelligence

Waterloo, ON

- Coursework: Deep Learning, Machine Learning, Statistics, Exploratory Data Analysis, Data Engineering

McMaster University

September 2020 – April 2024

Bachelor of Applied Science in Computer Science

Hamilton, ON

SKILLS

Programming Languages: Python, SQL, R, JavaScript

ML/Data Analysis: Scikit-learn, PyTorch, TensorFlow, Pandas, Matplotlib

Technologies: Snowflake, Apache Airflow, GCP Cloud Composer, Docker, Power BI, NoSQL, Git

EXPERIENCE

Data Scientist

May 2025 – December 2025

Thri5

Toronto, ON

- Built and deployed 20+ statistical and **ML models** to uncover actionable supply chain insights for a major retail client, **increasing client profit by 3.6%** and cycle count performance by 138%
- Built a scalable end-to-end **ML pipeline** in Snowflake, orchestrated via Airflow DAG
- Conducted a causal inference analysis on our first customer pilot, using **statistical significance** testing (ANOVA) to validate **≈\$2 million profit uplift**, securing the startup's first commercial deal
- Contributed towards the development of a **multi-agent AI system** to assist users in taking actions quickly and answer domain specific questions
- Transformed ambiguously defined customer requests into actionable implementation steps
- **Analyzed large datasets** to discover and present insights to non-technical stakeholders
- Leveraged skills in **SQL** (Snowflake), Apache Airflow, exploratory data analysis, **machine learning**, and statistics

Deep Packet QA Engineer

May 2024 – August 2024

Nokia

Kanata, ON

- Developed a browser-based tool using Plotly to analyze and visualize network traffic stats over time, from **unstructured** text documents, identifying root-causes of 3+ customer-reported bugs
- Generated artificial network traffic using Scapy for 12 feature tests, enhancing test coverage and robustness
- Leveraged skills in **Python**, **data visualization**, network analysis (Wireshark, Scapy) and Git

Software Engineer

May 2022 – August 2022

TD Bank Financial Group

Toronto, ON

- Redesigned and developed the front-end of a KPI dashboard to improve **data visualization** and user experience
- Developed a scraper using cron and MongoDB to pull and store health data from Datadog monitors, allowing the KPI dashboard to display health statuses of internal software
- Leveraged **Python**, Flask, and **MongoDB** to streamline **data processing**, and worked in an Agile environment

PROJECTS

Predicting NHL Concussions

December 2024

- Developed supervised **ML models** on an imbalanced dataset to predict NHL players' next-season concussion risk
- Conducted **data wrangling** on 10,000+ player stat records using Pandas, identified feature multicollinearity with Variance Inflation Factor (VIF), applied SMOTE for data augmentation, and tuned hyperparameters
- Authored a research paper comparing model performance using accuracy, precision, recall, and F1 score
- Achieved 90.1% test accuracy and 0.833 F1 score on Random Forest using k-fold cross-validation

DeltaHacks – Reviewify

January 2024

- Built an AI-powered web app that analyzes Google Reviews for individual business locations to generate sentiment metrics, summaries, and category insights using LLMs
- Implemented **prompt-engineered** LLM pipelines using Cohere's Classify and Chat APIs
- Utilized a Redis database with Google's Geolocation and Places APIs to get review data for any business in Canada, and then integrated this with the React frontend by developing a **Flask API**
